

Why I got an AA in the course CS 733

Kallol Dey, 123050030, CSE, M.Tech. II

The following are the reasons why I got an AA in CS733:

- 1. Proper implementation of the course project:** I have completed the project properly. I have done more than what was expected deliverables of the project. The project was completed in time and met the expectations of the Instructor of the course.
- 2. Proper understanding of the project:** I have achieved a proper understanding of the whole project and its design. I got enough reasoning about why I choose particular design principle over other while doing the development work of the project.
- 3. Completed assignments properly:** I completed all the assignments in time and the quality of the submissions were good.
- 4. Achieved confidence in system design:** Before taking this course I had some limitations in choosing or doing any software design which likely to be run in distributed environment. Attending this course and learning the material helped me to overcome that limitations. I am now confident in designing any software devoted for distributed environment.
- 5. Participate and socialize:** I contributed in the piazza course page to some possible extent. I hope those contribution helped people. I also discuss with peers about several topics related to the course to clear mine and their doubt.
- 6. Documentation:** All the assignments and projects that I had done in this course are properly documented. Documentation is done with care so that it not only contains technical details but also have enough details about features present and their usage.
- 7. Open source:** I extensively used github and all the projects are kept public in github. I hope this projects and assignments will contribute to the open source design community.
- 8. Linked the engineering with theorem:** I pro-actively read several papers and material related with course content. The project already give me the engineering aspect of the system and this allied reading completed the whole picture.
- 9. Discuss with Instructor:** Whenever I had any doubt I discuss with Instructor to get that resolved. I also took his feedback about my work from time to time and reflected the change accordingly. This helped me to keep the better quality of my work.
